

Nikita Kudriashov

Machine Learning Manager

Serbia | +381637238966 | nskudriashov@gmail.com | linkedin.com/in/nkudriashov | kaggle.com/nikitakudriashov

Senior Applied Scientist with 10+ years of experience in delivering AI and data-driven solutions across retail, energy, gamedev, and industrial sectors. Specialized in Generative AI, Agentic AI, ML system design, and algorithmic forecasting. Experienced in deploying ML models to production. Strong focus on problem-solving, algorithmic thinking, and engineering quality. Partnered with product managers, and stakeholders to deliver high-impact solutions that drove strategic decision-making and revenue growth. Fluent English language skills (C1).

Tech Stack

Languages: Python, C++, SQL

Frameworks: PyTorch, FastAPI, ONNX, TensorFlow

LLM & GenAI: Transformers, vLLM, Mamba (SSM), Qdrant, RAG pipelines, Hugging Face

Data & MLOps: PySpark, Databricks, Airflow, Pandas, NumPy, SciPy, Scikit-Learn, Azure, AWS, Docker, Kubernetes

Visualization & Tools: GitLab, Jenkins, Weights & Biases (W&B), Dash, Tableau, MLflow

Key Achievements

- Built and deployed **15+ ML solutions** in production (LightGBM, Prophet, FastAPI, Azure, AWS) across forecasting, RAG/LLM, and adaptive UX — generating **>300% ROI** and reducing operational costs for major FMCG clients (KFC, Mars, Henkel, Unilever, Perfetti Van Melle)
- Reduced level development time by **40%** via Multi-Agent GenAI pipeline (Claude, GPT) with simulation engine for automated Match-3 level design
- Drove **~20% LTV** growth and **>300% ROI** through ML-based adaptive user experience control system reducing churn by **50%**
- Designed and taught Generative AI & ML course (**30+ lectures**) at EPIC Institute of Technology

Professional Experience

VOKI games (Playrix)

Serbia, Novi Sad

The #1 European mobile game publisher

Machine Learning Manager | Sep 2025 – Present

- Developed a roadmap for the enterprise-wide integration of AI models.
- Developed a churn prediction ML model for Match-3 games to identify at-risk players. Drove an estimated 20% LTV growth.
- Designed and implemented a player experience embedding model based on Mamba (SSM) architecture to capture long-term behavioral patterns. Reducing player segmentation mismatches by 30%.
- Developed a Multi-Agent GenAI framework to automate Match-3 level creation. Integration with a custom gameplay simulator accelerated the level design pipeline time by 40%.

Rubbles (SBDA Group)

Serbia, Novi Sad

Company specializing in data-driven business process optimization for large enterprises.

Lead Applied Scientist | Jan 2023 – Aug 2025

- Designed ML demand forecasting toolkit. Led integration into major FMCG clients (KFC, Mars, Henkel, Unilever), increasing product availability by 5% in average
- Built internal LLM-based RAG system for knowledge retrieval (LangChain, FAISS). Reduced onboarding time by 50% for new engineers.
- Served as a primary technical liaison for the CEO and stakeholders, aligning AI roadmaps with business goals and presenting ROI-driven performance reports to C-level executives.

Senior Applied Scientist | Apr 2022 – Jan 2023

- Engineered demand and promo elasticity models (LightGBM, XGBoost, Statmodels) for Perfetti Van Melle, resulting in a 15% reduction in stock-outs and a 10% decrease in excess inventory.
- Designed and deployed production-ready ML services using Spark and Docker, ensuring high-throughput data processing and seamless integration with backend infrastructure.
- Orchestrated cross-functional delivery and mentored a team of 5+ developers, establishing best practices for code robustness and scalable AI infrastructure.

Applied Scientist | Nov 2021 – Apr 2022

- Architected a global-scale demand forecasting system for a leading QSR brand, improving WAPE by 12% through advanced feature engineering.
- Directly boosted campaign ROI and product availability by implementing real-time traffic features, resulting in a 7% reduction in perishable food waste.

Biggest oil and gas company (confidential client)

Moscow, Russian Federation

ML Research Engineer | Jun 2017 – Nov 2021

- Led the Energy Efficiency & Cost Optimization project. Developed dynamic ML models and factor analysis algorithms for energy consumption. Achieved an estimated 5-7% reduction in energy costs..
- Scaled AI Operations & Strategy: Headed the Data Science department, overseeing resource allocation across multiple IIoT projects and mentoring a cross-functional team of 6+.
- Designed and deployed an automated anomaly detection solution for oil production (Keras, TensorFlow). Reduced equipment downtime by 12%.
- Digital Twin Engineering: Architected a "Digital Twin for Oil Manufacture" MVP, simulating complex refining processes. Built the scalable backend (Python, K8s, Kafka) and interpreted ML models to identify dynamic properties of technological objects, accelerating R&D cycles for complex industrial assets.

Education

- **2021:** PhD Candidate in Computer Science – SPbPU (ABD)
- **2017:** MSc in Technical Systems Management – SPbPU, Russia
- **2015:** BSc in Computer Sciences – SPbPU, Russia
- **2013:** Erasmus Exchange – Czech Technical University, Prague (full program in English)

Certifications

Generative AI – [DeepLearning.AI](#) Jan 2024

Advanced Data Science – IBM Jul 2023

SQL for Data Science – UC Davis Sep 2021

Additional

Fluent in English (Teaching and Presenting Experience)

Recommendations from professionals and leaders at top-tier tech companies
